

# Transitioning Your Care

Our goal, like that of our patients and their families, is for them to return home as safely, quickly and independently as possible. While the majority of our patients are successfully discharged to home, some were transitioned to the next level of care or services.

Our patients' **Length of Stay** varies, depending on the individual's diagnosis, plan of care and progress. Overall, patients at Kessler Institute – Marlton campus had an average length of stay of 14 days.

Spinal Cord Injury	Brain Injury	Stroke	Neuro-logic	Cardiac	Ortho-pedics	Amputa-tion	General Rehab
16 days	14 days	20 days	15 days	11 days	11 days	14 days	12 days

A majority (70%) of the 1,494 patients who chose Kessler for their rehabilitation in 2018 were **discharged to home**.

Spinal Cord Injury	Brain Injury	Stroke	Neuro-logic	Cardiac	Ortho-pedics	Amputa-tion	General Rehab
71%	70%	64%	82%	67%	77%	55%	70%

Some patients who completed their inpatient stay were not yet ready to return home and were **transitioned to the next level of care**. In 2018, about 19% of our patients went to sub-acute/nursing facilities.

Spinal Cord Injury	Brain Injury	Stroke	Neuro-logic	Cardiac	Ortho-pedics	Amputa-tion	General Rehab
16%	16%	20%	11%	11%	17%	25%	12%

In some cases, patients required more extensive testing, medical services and/or follow-up procedures not available in the rehabilitation setting. As a result, about 11% of patients were transferred to an **acute care hospital** in 2018; most returned to Kessler to continue their rehabilitation.
